Master Program for China-Russia Educational Cooperation
Major in Power Engineering

0858

several high level scientific research projects are implemented jointly with National Natural Science Foundation, Natural Science Foundation of Jiangsu Province and the Ministry of National Defense of the People's Republic of China. With enough research fundings, all conditions were created to recruit the students for the program.

“ ”

“ ”

“

”

“

” “ ”

"Autonomous sources of power supply and electric transmission" which are working as a part of the center. A large amount of Master degree students takes part in various types of practical work on its basis. Teaching staff of the Chair regularly becomes participants and winners of the grants of Ministry of Education and Science of the Russian Federation, the Fund for the Promotion of Innovations and etc.

Training Object

“ ”

Students of this programme should grasp both solid theoretical foundation and systematic specialized knowledges in the sphere of power engineering, and obtain the ability on analyzing and solving problems independently. They should master both the basic technologies such as experiment tests, data analysis, computer programming, and develop the high innovative activity. In addition, the students should be familiar with international educational environment and have international communication skills. As a result, after graduation, they can be engaged in teaching, scientific research, design, production and management etc. in the field of power engineering under the international conditions, especially the initiative of the joint projects of building up the Silk Road Economic Belt and the 21st-century Maritime Silk Road.

Through this joint program both universities intend to achieve coordinated development in this academic field, contribute to its creation and train students with abilities and competencies which are appropriate for the international labour market and which meet the requirements for the Chinese-Russian social and economic cooperation process.

Research Topic

No.	Name of research direction	Brief introduction
1	The combustion and emission control for power machinery	Marine diesel engine before- and after-treatment

	and equipment	technologies; Hazardous materials generation and control theories in internal combustion engine; New combustion system design; Low emissions engine technology
2	Vibration and noise control and fault diagnosis for power machinery	Low noise engine design technology; Vibration and noise control for marine main and auxiliary engines; Monitoring and fault diagnosis for marine power plant.
3	Strengthened heat and mass transfer and effective energy utilization technology	Mechanism of strengthened heat and mass transfer; New theories and methods of strengthened heat and mass transfer; Effective energy utilization in energy and power system.
4	Refrigeration, air conditioning and cryogenic engineering	Geothermal energy conversion and geothermal direct use; Cooling performance, air quality, thermal comfort and energy consumption for air conditioning system in new fuel ships.
5	New energy technology and application	Research on scientific and engineering application fields relating to the ship auxiliary new energy power system and marine wind energy applications

Teaching Language

English and Chinese

Period and Credit

1. Period: 1+1+0.5

The standard period lasts 2.5 years, which can be prolonged for another half a year according to the relevant provisions.In the first year, students will have courses in China. In the second year, the students will transfer to Russia to continue their study of the second

stage, carry on subject research and complete their Russian dissertation. In the last one half year the students will work on the Chinese dissertation preparation and complete defense in China.

2. Credit

The EU credits and total EU credits of educational programmes are established by the partner universities according to the state requirements of each party. 60 credits are required for the program students in China, among which not less than 24 credits for degree courses, not less than 17 credits for elective courses and not less than 19 credits for practical trainings. To get the master degrees from both JUST and OMSU, the students have also to meet the degree awarding requirements including scientific research of the both universities. The students should successfully complete educational programme in full and pass State Final Examination to get the master degrees.

Each party approves the curriculum in accordance with the requirements of its country.

The first year: at JUST								
Course type		**Course name**	**Credithours**	**Credit**	**Semester**	**Language**	**Department**	**Remarks**
Degree Course 24	**General Course**	The socialism theory and practice with Chinese characteristic	32	2	Autumn	Chinese	JUST	Required course
		First Foreign Language Russian	128	4	/ Autumn/ Spring	Bilingual	JUST	

		Mathematical physics equations	48	3	Autumn	English	JUST	
	Specialized Course	Contemporary fluid and gas dynamics	48	3	Autumn	English	JUST	
		Modern theory of heat transfer	80	5	Autumn	English	OMSU & JUST	
	Specialized Core Course	Calculation and design of autonomous energy sources	64	4	Spring	English	OMSU	
		Calculation and design of automatic control systems for small energy facilities	48	3	Spring	English	OMSU	
Non-Degree Course 17	**Specialized elective course**	Application of fuel cells	48	3	Spring	English	JUST	2 1 Select one
		Renewable energy technology	48	3	Spring	English	JUST	
		Instrumental survey of small energy facilities	48	3	Spring	English	OMSU	2 1 Select one
		Signal analysis and fault diagnosis	48	3	Spring	English	OMSU	
Non-Degree Course 17	**Specialized elective course**	Management of energy flows at cogeneration units	48	3	Spring	English	OMSU	2 1 Select one

		Application of heat pump systems	48	3	Spring	English	OMSU	
		Literature searching and scientific paper writing	32	2	Spring	English	OMSU	2 1 Select one
		Social adaptation and the basics of socio-legal knowledge	32	2	Spring	English	OMSU	
		Calculation and design of heat transformers	48	3	Autumn	English	JUST	2 1 Select one
		Calculation and design of water recycling systems	48	3	Autumn	English	JUST	
		Management of energy flows in marine power plants	48	3	Autumn	English	JUST	2 1 Select one
		Fundamental of digital design	48	3	Autumn	English	JUST	
		Engineering ethics	16	1	Spring	Chinese	JUST	Required Elective
		Introduction to dialectics of nature	16	1	Spring	Chinese	JUST	Required Elective
Practical trainings 19		Academic practice		3	Spring	English	OMSU & JUST	
		Work experience practice		6	Spring	English	OMSU & JUST	

		Research		10	Autumn Spring	English	OMSU & JUST	

The second year: at OMSU

Subject study and Research

The third year: at JUST		
Content	Dissertation and dissertation defense	Remark: Students succeeded in Chinese dissertation defense

Scientific research requires

JUST requirements

Before the defense, the program students should publish 2 papers in journal or in proceedings of national conference jointly with the supervisor (tutor as the first author). It could be a related invention patent disclosure.

OMSU requirements

Master's dissertation includes the use of new solutions (methods, dependencies, models, etc.) which are directly connected with approved topic. The novelty of the proposed solutions should be confirmed by the author in scientific articles (collections of articles, conference proceedings), patents for invention/utility model (at least two articles or patents should be performed during the whole period of study). A manuscript of review article, reflecting the problem of the dissertation topic not only in Russia and China, but also in the world, should be prepared at the end of the first year of study.

Dissertation

The topic selection should be related to the field of Power engineering/Heat power engineering which has the actual engineering or the specific engineering background, and involves solution of particular technical tasks, novelty and workload directed on Master degree student. The dissertation should reflect the ability of Master degree students to use scientific theories, methods and techniques to solve practical problems, and have a certain theoretical basis, which is advanced and practical.

To apply for OMSU master degree, the dissertation should be written in English and made according to the standards of drawing up the documentation connected with academic activity. To apply for JUST master degree, the dissertation could be written in

English or Chinese. If the dissertation is written in English, the abstract should be translated into Chinese. If the dissertation is written in Chinese, the abstract should be translated into English.
